

# CHARTING PROGRESS: INSIGHTS FROM MOROCCO'S LONG-TERM LOW-EMISSION DEVELOPMENT STRATEGIES AND THE NET ZERO SCENARIOS

## Morocco ambitions to achieve Net Zero by 2050

### Four strategic orientations

- 1. Renewable Revolution:** Accelerating the Strong Development of Renewable Energies to achieve a 96% decarbonized and widely adopted electricity mix by 2050 and Promoting Green Hydrogen for Industry and Transport Decarbonization.
- 2. Efficiency Everywhere:** Generalizing Energy and Resource Efficiency in All Sectors, Including Industry, Buildings, and Transport, and Stimulating Circular Economy and Waste Valorization Sectors.
- 3. Green Growth:** Developing Sustainable and Resilient Agriculture and Forest Ecosystems, Along with Creating Carbon Sinks.
- 4. Smart City Evolution:** Promoting a New Generation of Efficient and "Smart" Cities with Zero Emission Transportation Plans and Logistics, Focused on Multimodality and Integrating New Digital Technologies.

Nature based solutions, like reforestation and rangelands restoration, are strategic in order to achieve carbon neutrality, while strengthening capacities to allow the national economy to adapt to global warming, to mitigate water stress and preserve biodiversity.

## Morocco ambitions to achieve Net
